Dear Sir

## **ZGM 2008/016 – ANTHONY MOLYBDENUM TO BE DRILLED DEEPER**

**Following the successful completion of the first 13 hole Reverse Circulation (RC) drill program at the Anthony Molybdenum discovery, Zamia Gold Mines Limited (ZGM) has entered into a contract for a diamond drilling program.**

- The diamond drilling contract is to drill initially up to 1200 metres in four holes to a vertical depth of at least 250m. Drilling is planned to commence in May 2008.
- This drilling would test the deposit to almost double its currently drilled vertical depth which averages 130 metres.
- A number of molybdenum mines under development which have deposits similar to Anthony are planning open cut mining down to a depth of at least 300 metres.
- Upon completion of the diamond drilling program the company will plan a further extensive drilling program of at least 7000 metres with the intention of identifying an inferred resource by year end.

For and on behalf of the Board

Colin Seaborn
